

When I Visit the Dentist

I may have to sit in the reception area and wait my turn

The dentist room has a big comfortable chair that reclines

I can tell my dentist if there are any problems with my teeth.

The dentist uses tools to examine my teeth and gum to make sure they are healthy

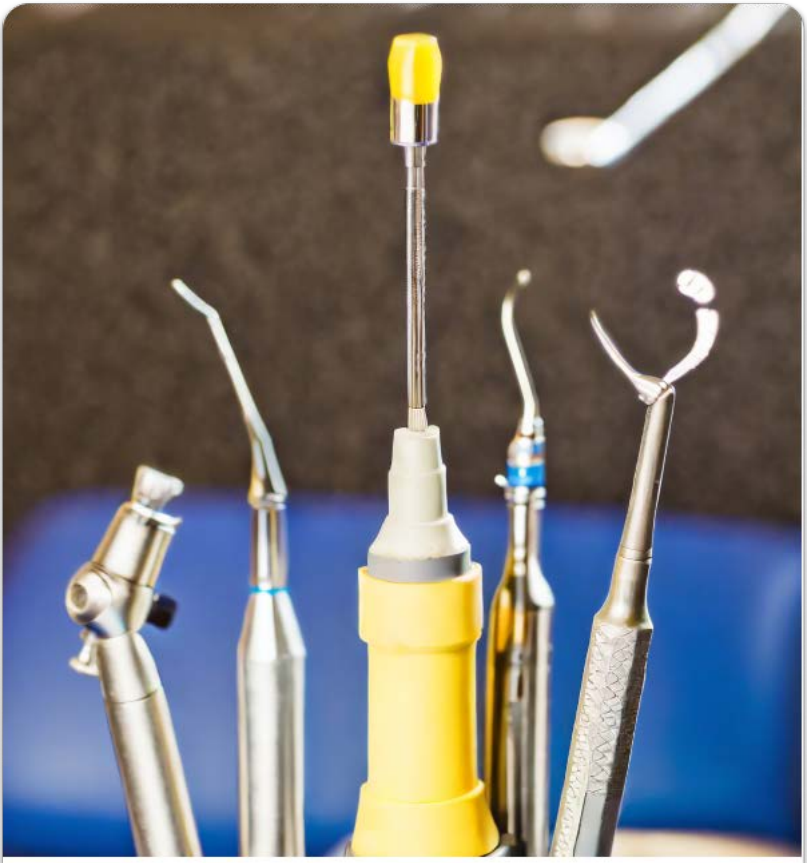

A bright light will shine down so the dentist can get a good look at my teeth.

My dentist may spray water in my mouth to rinse my teeth.

Next to your chair is a little sink that you can use to rinse your mouth.

There many different dental tools depending on what needs to be done with my teeth.

Sometimes my dentist will take X-rays, or pictures, of your teeth to check for cavities.

It does not hurt to get an X-ray and it takes only a few seconds.

If I have a cavity or tooth decay my dentist has to treat and repair the tooth.

If I have a cavity my dentist will give me a shot to numb my mouth so I don't feel anything.

My dentist will use different tools to remove the cavity. Some of the tools are noisy.

My dentist teaches me how to take care of my teeth and gum.

My dentist tells me to make an appointment to see me for checkup in six months.

Great Job!
